Description:

The T8BLHG40D1-0409&0904 provides 100GBase-BX throughput up to 40km over single-mode fiber (SMF) using a wavelength of 1304.58nm-TX/1309.14nm-RX via an LC connector. The design is compliant to 100GbASE-ER1 of the IEEE 802.3-2012 Clause 88 standard IEEE 802.3cu CAUI-4 chip to module electrical standard ITU-T G.959.1-2012-02 standard . The module converts 4 inputs channels (ch) of 25Gbps electrical data to 1 lane optical signal channel for 100Gb/s(PAM4) optical transmission. Reversely, on the receiver side, the module a optical 100Gb/s(PAM4) input into 1 lane signal, and converts them to 4 lanes output electrical data.

- 2. Fully functional is defined as IntL asserted due to data not ready bit, bit 0 byte 2 de-asserted.
- 3. Measured from falling clock edge after stop bit of read transaction.
- 4. Measured from falling clock edge after stop bit of write transaction.

Notes:

- GND is the symbol for single and supply(power) common for QSFP28 modules, All are common within
 the QSFP28 module and all module voltages are referenced to this potential otherwise noted. Connect
 these directly to the host board signal common ground plane. Laser output disabled on TDIS >2.0V or
 open, enabled on TDIS <0.8V.
- VccRx, Vcc1 and VccTx are the receiver and transmitter power suppliers and shall be applied
 concurrently. Recommended host board power supply filtering is shown below. VccRx, Vcc1 and VccTx
 may be internally connected within the QSFP28 transceiver module in any combination. The connector
 pins are each rated for maximum current of 500mA.
